

# Phone Hint File

Scroll Down

You will have needed to open Lana's neighbor interview first.

At the end of the interview she asked you to help her sort her paints with numbers.

She says she adds 5 to the numbers before mixing

Example: Red would become 62, then add it to the number yellow would become.

This makes orange but she also says she divides by 2 to get the perfect hue. So just divide that number by two.

The phone also has colors in a certain order which means the numbers need to be in that certain order
